

# HEADREST MONITOR INSTALLATION

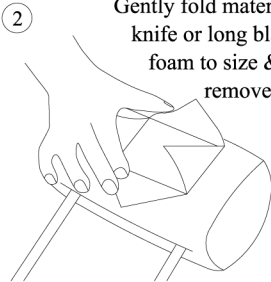

## KIT INCLUDES:

1. 1 Headrest monitor
2. 1 ABS plastic backing plate
3. 1 Wire harness
4. 2 VELCRO adhesive strips
5. Cut-out template/instructions (Headrest not included)

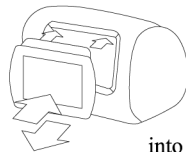

Mark and carefully cut fabric. Cut out size shown is 1/2" smaller than actual monitor back so that monitor will fit snugly into the headrest.

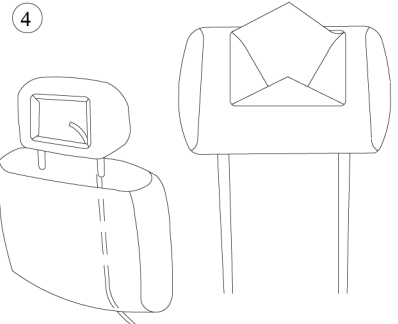

2 Gently fold material outward. With knife or long blade, carefully cut foam to size & depth. Carefully remove excess foam.

TECH TIP: 9502 is great for cutting out foam in headrest

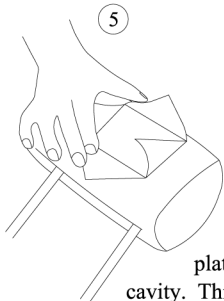

DO NOT APPLY PRESSURE ON SCREEN

Place monitor into headrest before making connections to check for fit only. Verify that enough foam has been removed. Remove monitor

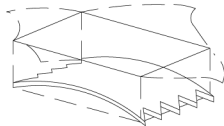

4 Carefully route RCA and power leads down (or up, whichever is easier) through the seat.

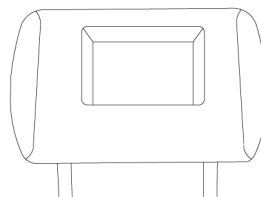

TECH TIP: 5026T, 7640, 7641 are all great for pulling wire through seat.

5 With flaps still folded back, insert the backing plate into the back of the foam cavity. This must be done by placing one end of the plate into position and, with the plate bowed as shown, insert the second end into the cavity

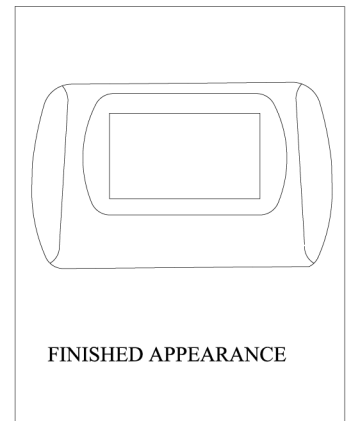

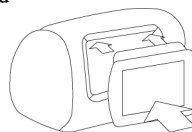

6 Tuck fabric in and around foam. Glue with contact cement for a secure bond.

7 Attach two 4" strips of VELCRO to back of monitor. Holding monitor close to headrest, plug the power, ground and video leads into monitor. Temporarily fit the monitor into the opening and set the viewing angle and make adjustments to the brightness, tint, gamma, and color (located at the bottom of the monitor). Use a small flathead screwdriver to make adjustments. Peel off protective lining of VELCRO strips. Firmly press the monitor into place, pressing from the edges.

**DO NOT APPLY PRESSURE ON SCREEN!**
